

## **AERB exhibition stall at DAE Convention centre during NUCAR 2023 symposium**

AERB participated in the 16th DAE-BRNS biennial symposium on "Nuclear and Radiochemistry-2023," (NUCAR-2023), which was held from May 1-5, 2023, at the Department of Atomic Energy (DAE) Convention Centre in Anushaktinagar, Mumbai. The symposium was jointly organized by Bhabha Atomic Research Centre and Indian Association of Nuclear Chemistry and Allied Scientists (IANCAS).

The symposium brought together around 400 delegates from various academic and R&D institutions, including units of DAE, universities, and foreign participants and from public sector.

AERB set up an exhibition stall at the symposium providing details of regulatory requirements in the use of radiation sources, esp. sources used in research and regulatory requirements in the nuclear fuel cycle facilities. Officers with expertise in the field of nuclear fuel cycle facilities, nuclear research facilities, radiation facilities (research, medicine, and industry), radioactive waste management, and environmental surveillance, answered the queries from visitors.

The stall aimed to educate delegates on AERB's regulations in nuclear and radiation facilities and was a great opportunity for AERB to interact with various stakeholders and delegates from Universities.
